AUTHOR

Baumgartner, K M, Kling, R M and Wah, B W Implementation of an efficient load-balancing strategy for a local computer system 216

Bondavalli, A and Simoncini, L Data-flow-like model for robust computations 176

Chaisemartin, P, Dreyfus, G, Fontet, M, Kouka, E, Loubières, P and Siarry P Placement and channel routing by simulated annealing: some recent developments 35

Chintamaneni, P R and Dowdy, L W Workload characterization and synthetic workload generation: an application study 205

Di Giandomenico, F, Guidotti, M L, Grandoni, F and Simoncini, L Evaluating the efficiency of Byzantine Agreement algorithms 3

Dimopoulos, N J, Li, K F, Wong, E C-W, Dantu, R V and Atwood, J W Homogeneous multiprocessor system: a status report 227

Gait, J, Laskodi, T and Krull, R Interactive monitor for a communication kernal 154

Gurd, J R Dataflow architectures 241

Hollenberg, J P Summary of vector supercomputer architectures 147

Hunt, D J AMT DAP—a processor array in a workstation environment 107

Hurson, A R, Miller, L L, Shirazi, B and Pakzad, S H Performance evaluation of an associative parallel join module 131

Kingston, T NCR 9800 fault-tolerant mainframe 49

Kremer, O and Gaudiot, J-L An architecture for parallel matching in a PROLOG programming environment 19

Krishnan, V and Kumar, V K P Efficient data movement operations for image template matching on hypercube SIMD machines 169

Lakshmi, M S and Yu, P S Impact of skew on access path selection in relational database systems 195

Lui, P K and Muzio, J C Testing of feedback bridging faults between the output and inputs of a combinational network 12

McCrosky, C Message passing in synchronous hypercubes 89

Miller, L L, Hurson, A R, Pakzad, S H and Tsai, H J Handling temporal databases in the ASLM—a backend database machine 78

Scevarolli, M and Simoncini, L Reliable multicast protocols for a token-ring architecture 67

Son, S H Algorithm for efficient decentralized checkpointing 27

Won, Y and Sahni, S Host-to-hypercube sorting 161

Zhang, K and Wilkinson, B Towards a virtual dataflow-based PROLOG machine 97

TITLE

Algorithm for efficient decentralized checkpointing **Son, S H** 27

AMT DAP—a processor array in a workstation environment **Hunt, D J** 107

An architecture for parallel matching in a PROLOG programming environment **Kremer, O and Gaudiot, J-L** 19

Dataflow architectures **Gurd, J R** 241

Dataflow-like model for robust computations **Bondavalli, A and Simoncini, L** 176

Efficient data movement operations for image template matching on hypercube SIMD machines **Krishnan, V and Kumar, V K P** 169

Evaluating the efficiency of Byzantine Agreement algorithms **Di Giandomenico, F, Guidotti, M L, Grandoni, F and Simoncini, L** 3

Handling temporal databases in the ASLM—a backend database machine **Miller, L L, Hurson, A R, Pakzad, S H and Tsai, H J** 78

Homogeneous multiprocessor system: a status report **Dimopoulos, N J, Li, K F, Wong, E C-W, Dantu, R V and Atwood, J W** 227

Host-to-hypercube sorting **Won, Y and Sahni, S** 161

Impact of skew on access path selection in relational database systems **Lakshmi, M S and Yu, P S** 195

Implementation of an efficient load-balancing strategy for a local computer system **Baumgartner, K M, Kling, R M and Wah, B W** 216

Interactive monitor for a communication kernel **Gait, J, Laskodi, T and Krull, R** 154

Message passing in synchronous hypercubes **McCrosky, C** 89

NCR 9800 fault-tolerant mainframe **Kingston, T** 49

Performance evaluation of an associative parallel join module **Hurson, A R, Miller, L L, Shirazi, B and Pakzad, S H** 131

Placement and channel routing by simulated annealing: some recent developments **Chaisemartin, P, Dreyfus, G, Fontet, M, Kouka, E, Loubières, P and Siarry, P** 35

Reliable multicast protocols for a token-ring architecture **Scevarolli, M and Simoncini, L** 67

Summary of vector supercomputer architectures **Hollenberg, J P** 147

Testing of feedback bridging faults between the output and inputs of a combinational network **Lui, P K and Muzio, J C** 12

Towards a virtual dataflow-based PROLOG machine **Zhang, K and Wilkinson, B** 97

Workload characterization and synthetic workload generation: an application study **Chintamaneni, P R and Dowdy, L W** 205

SUBJECT

Book reviews

An introduction to distributed and parallel computing 53

Built-in test for VLSI 56

Modelling of computer and communication systems 53

Networks and distributed computation 55

Professional software 116

Quantitative analysis of computer systems 54

Special purpose computers 185

Strategies for real-time system specification 116

The characteristics of parallel algorithms 54

Transputer reference manual 56

Calendar 64, 128, 192, 255

News 57, 119, 186, 253
